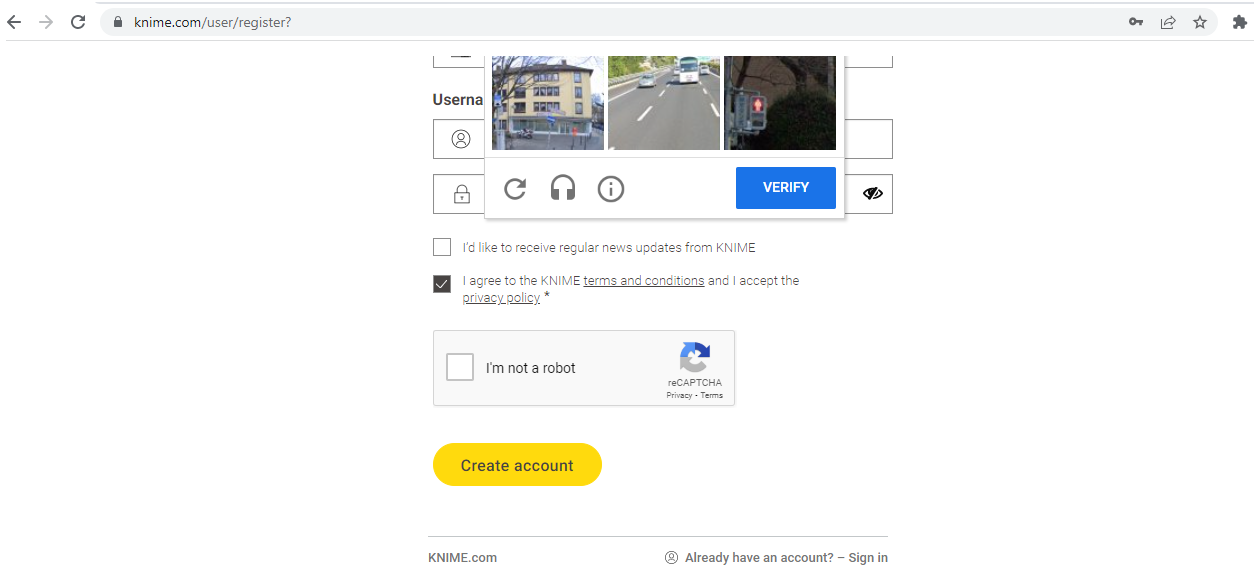
Bug Report

1. **New user creation, Captcha screen partially visible**

While creating a new user, captcha is partially displayed, when user tries to scroll to select elements on captcha, the captcha screen is disappeared which results in annoying user experience

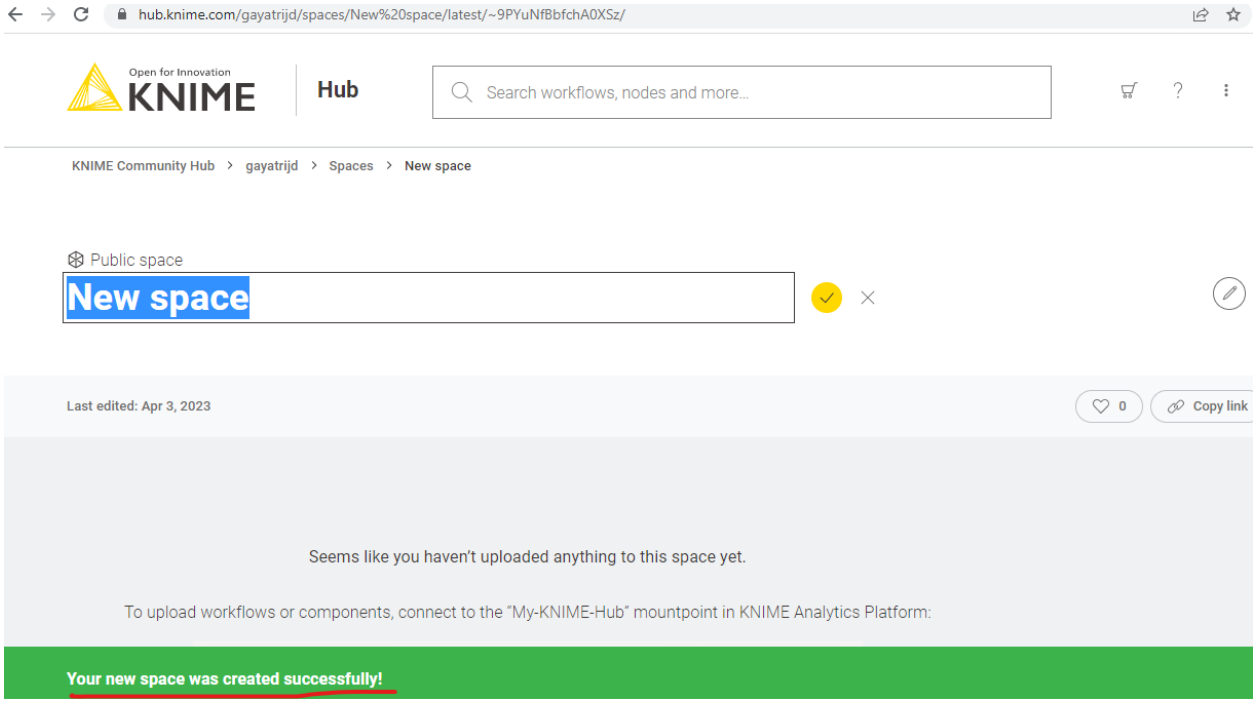


2. **Navigating to Public/private space is creating a new space**

Steps to reproduce-

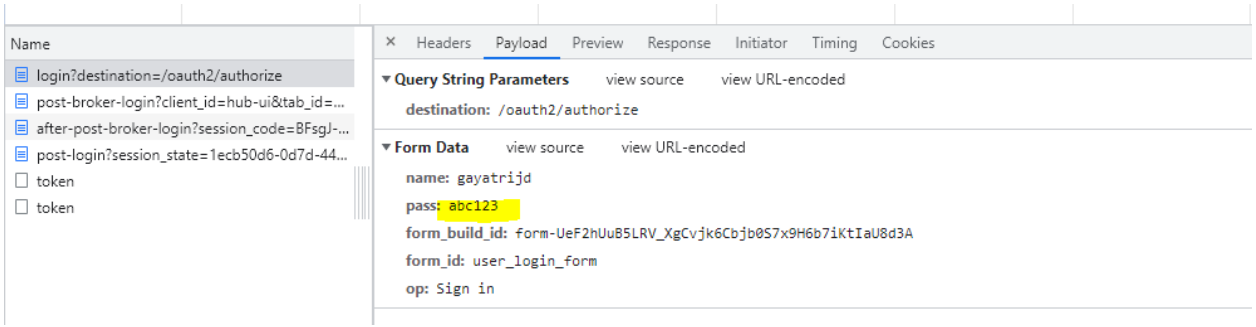
1. Login as a user to https://hub.knime.com/
2. Clicking on profile name navigate to spaces
3. Click on Create new space>Public space/ Private space

Expected- New space creation should not be created
Actual- space is created when user navigates to Public/private space
Priority - High
Severity- High



Priority - High
Severity- High

3. when user login with UI and access developer tool for checking request of logged in user, password is not encrypted



API Issues-

API login sequence was unclear hence could not proceed with complete workflow with cookie values from login request. Swagger APIs if provided could be helpful to get more clarity on workflow sequence.

I have still used existing cookies and updated the Automation for API in the code.
